

## HELDENFELS INAUGURATES 'FLOOR BEAM' IN LONE STAR STATE

Heldenfels Enterprises, Inc. recently produced the first Texas Department of Transportation-designed "Floor Beam" for the Seventh Street Bridge over the Trinity River in Ft. Worth. The beams are 86-ft. 4-in. long and 5-ft. 8-in. deep at the midpoint or belly, tapering to a thin 16 in. at the ends. The bridge marks the first time the cross section has been designed, fabricated and specified in Texas. Heldenfels will produce and ship 102 of the beams to Sundt Construction during the first five months of 2013.
